

## Declaration of Conformity REACH

### Lead in brass as SVHC substance

WITT-Gasetechnik is not a manufacturer or distributor of chemicals. However, the European REACH regulation on chemical legislation also regulates the notification obligation for manufacturers of products whose composition contains relevant substances (Art. 33). Accordingly, we are obliged to inform our customers if a delivered article contains a substance from the SVHC candidate list for the authorisation procedure at more than 0.1 % (<https://echa.europa.eu/de/candidate-list-table>). The smallest article of a composite article serves as reference value (definition at <https://www.reach-clp-biozid-helpdesk.de/de/REACH/Erzeugnisse/EuGH-Urteil/EuGH-Urteil.html>).

Various WITT products made of brass, especially safety fittings such as safety devices, gas non-return valves, safety valves or quick couplings contain the substance lead (EC Number: 231-100-4, CAS Number: 7439-92-1) at more than 0.1 % in several components made of brass (housing and/or internal parts). However, since lead is firmly bound as an alloy component and thus no exposure is to be expected, no additional information on safe use is necessary. Labelling on the product is also not necessary - i.e. there is no need to apply a notice that it contains a SVHC substance.

If you need further information on materials, you will find it in our technical data sheets or on request at [witt@wittgas.com](mailto:witt@wittgas.com).
